

## INCIDENT MANAGEMENT SYSTEM

The cloud based Incident Management System allows for real time logging of incidents with comprehensive analyses and reporting through the integrated road asset management system.

### Key Features

- ▲ Real time logging of incidents & accidents
- ▲ Incident Data Capturing at any location
- ▲ Accident Data verification & Audit Trail generation
- ▲ Verification of Incident Data against the Natis Database (Vehicle & Driver)
- ▲ Generation of a list of hazardous accident locations
- ▲ Automatic Coupling of Incidents to the integrated mapping system

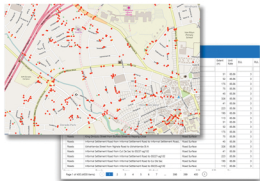

- Accident Count
- Accident Type
- Injury Count
- Injury Type
- Vehicle Count
- Day of Week
- Time of Day

Accident information is summarized for the user in graphs depicting accident types, injury types and the time of day / day of week that the accident occurred.

Through this integrated concept, effective problem resolutions will become part of the user's daily activities and the management of a safe road network will become second nature.
